

Alternative Heat

Alternative Heat have been recruiting Higher Level Apprentices for 4 years, and currently have HLAs in Technical Design and Manufacture, Digital Construction and Quantity Surveying.

Alternative Heat would say that HLAs have allowed them to promote a culture of continuous learning and grow a qualified workforce, while introducing fresh ideas and new perspectives to their business. They have found SRC to have been very supportive of both the business and students with regular communication and onsite visits.

“HLAs within the business enables us to promote a culture of continuous learning, to grow a qualified workforce, while introducing fresh ideas and new perspectives to the business. A really great programme for both students and employers which we will continue and hope to grow over the years.” - Caoimhe McCartan, Talent Acquisition Administrator, Alternative Heat

What the Higher Level Apprentices say:

Ethan Trimble - “I have found the support from the SRC very helpful as you are constantly engaged. They provide workshops which help with revision for exams. I am really enjoying my HLA at SRC. It challenges you in a positive way. The balance between exams and coursework works well as some individuals are better than others at these. In terms of Alternative Heat, I would certainly recommend them to any aspiring engineer.”

Shannon Simpson - “I’ve found the Quantity Surveying HLA programme to be an excellent balance of academic learning and practical experience, with strong support both from the college and my employer, Alternative Heat, where I’m able to apply my skills in a real-world setting.”
